The need for travel demand models was recognized by urban and transport planners and researchers as far back as the mid-nineteenth century with the macroeconomic modelling of the spatial flows of people and commodities (see, for example, Carey, 1859).

MODELLING TRANSPORT: A Synthesis of Transport Modelling ...

Transport modelling is undertaken to help transport decision makers – and related decision makers, e.g. land-use planners, industrial investors, public health officers – to better understand the current, the future and sometimes the past transport systems, and to make better decisions about what to do.

Integrated Transport - Land Use Models These models are intended to forecast the effect of changes in the transport network and operations over the future location of activities, and then forecast the effect of these new locations over the transport demand.

Transportation forecasting - Wikipedia

Viscosity, thermal conductivity, and diffusion coefficient are called "transport properties." The chapter provides the analysis of each law with assumptions, graphical methods, and examples. Some dimensionless numbers such as Prandtl number, Schmidt number, and Lewis number are defined and derived from three constitutive equations.
